OCCUPATION	VP of Enterprise Sales
TECH PROFILE	Heavy iPhone user
FREQUENCY	2–3 flights per week (Domestic and International)

“ My travel time is my work time. I need an airline that anticipates my needs so I can focus on my clients, not my itinerary.

Personality

Delegator

Tech-Reliant

Discerning

Time-Starved

Bio

Adam manages high-stakes client accounts across the country. His time is his most valuable asset. While his Executive Assistant handles the initial booking of his flights, Adam is the one on the ground dealing with last-minute schedule changes, flight delays, and airport logistics. He wants a seamless, premium and boutique experience where he can either work with laser focus or rest comfortably before a big meeting.

Goals & Needs

- Maximize Productivity: Needs to arrive at his destination rested, prepped, and ready for high-level meetings.
- Time Efficiency: Wants to minimize any wasted time at the airport (security lines, waiting at the gate, waiting for baggage).
- Digital Ecosystem Integration: Wants his travel plans to automatically sync with his calendar, expense software, and Apple Watch.

Pain Points

- Reactive Communication: Hates finding out about flight delays from the airport screen rather than his phone.
- Too Many Notifications: Dislikes apps that spam him with marketing push notifications, but fail to notify him the second a gate changes.
- Administrative Burden: Dislikes the post-trip hassle of hunting down flight for corporate expense reports.

UXAirways App Opportunities

- "Smart" push notifications sent to his Apple Watch (include boarding time, exact gate walking distance).
- A hyper-flexible, one-tap rebooking option for last-minute schedule shifts.
- Automated expense tracking that can sync directly with corporate software or email to his assistant.

User Actions	- Adam identifies a critical need for an in-person meeting to close a high-stakes deal. - Assistant books the ticket. - Adam reviews the itinerary on his phone the night before and packs his bag.	- Adam arrives at the airport. - Passes fast-track security. - Heads to the boutique lounge to answer emails. - Boards.	- Adam reviews his presentation. - Orders a coffee. - Takes a brief nap.	- Adam lands. - Disembarks quickly. - Heads to the curb to meet his black-car service to the client's office.	- Adam finishes his meeting. - Flies home. - Submits all travel expenses to his accounting department.
Pain Points	- Sometimes itinerary emails get lost in his crowded inbox. - Manually adding flights to his calendar is annoying.	- Unpredictable TSA lines. - Not knowing exactly how far the lounge is from his departure gate.	Waiting for flight attendants to take drink orders interrupts his workflow.	- Figuring out exactly which door his car service is waiting at. - Waiting for luggage if he checked a bag.	Hunting through emails for flight, upgrade, and Wi-Fi receipts to expense the trip.
Touchpoints	- Email confirmation. - Calendar.	- Security checkpoint. - Departure board. - Lounge desk. - Gate agent.	- Airplane seat. - Flight attendant.	- Baggage claim. - Car service app.	- Email inbox. - Corporate expense software.
UXAirways App Opportunities	Itinerary Sync: App allows the assistant to securely push flights to Adam's app. Includes a one-tap rebooking option for last-minute schedule changes before heading to the airport.	Digital Concierge: Real-time push notifications sent to Adam's Apple Watch for TSA wait times, gate changes, and a walking map from the lounge to the gate.	Seat-Side Service: App allows Adam to pre-order his in-flight meal and coffee before boarding.	Ground Information Sync: App notifies Adam exactly which carousel his bag is on, and integrates with premium car services to have a driver ready at the curb.	One-Tap Expensing: App automatically compiles a single, itemized PDF receipt for the trip with a "Send to Assistant/Accounting" button for seamless corporate software sync.
